

CONNECT TO BETTER

weight

+20%

A noticeable difference

The weight of the fittings influences the acoustics of water flow. By adding 20% more weight to the fittings, Wavin SiTech+ reduces the acoustics of water flow while maintaining durable performance. A complete game changer, Wavin SiTech+ is the sound choice for a robust soil and waste system that sets a higher standard in the market.

Wavin SiTech+ offers a solution for every application. From large-scale construction to small renovation projects, SiTech+ is perfect for noise-sensitive environments such as apartments, hotels, offices, hospitals, nursing homes and residential spaces. Its noticeable noise improvement makes sure it goes unnoticed in any living or working environment.

More

performance

SiTech+ makes
installation easy

New black color

The new black color adds to the robustness of SiTech+ over its lifetime. The matte black finish improves protection against UV radiation when stored outside at your building site. Furthermore, the matte black surface is less sensitive to dirt.

Angular rotation guidance

Fittings have different indicators at 15° and 45° intervals for easy alignment, making it easy for you to align fittings which need to be positioned at a rotated angle.

Ribbed fittings

Ribbed fittings provide enhanced grip for easy installation in complex situations. SiTech+ is perfect for any project, from small renovations to large-scale construction jobs.

Insertion depth check

Clear indicators on the fittings checks complete insertion of the spigot into the socket. This easily visible depth check also helps when adding the 10mm space needed to handle thermal expansions at long pipe lengths.
